

CYBER CRIME AND CYBER ATTACK

NAME – *Kashmira Jha*

UNIVERSITY ROLL NUMBER – 14231120015

REGISTRATION NUMBER – 201420131110012

STREAM – *Computer Science & Engineering*

SECTION – A

YEAR – 2020-2024

SEMESTER – 8th

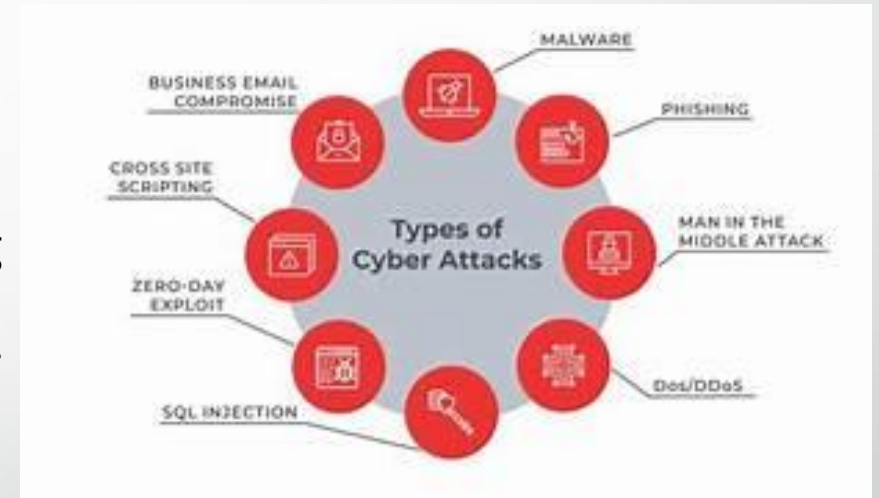

Introduction

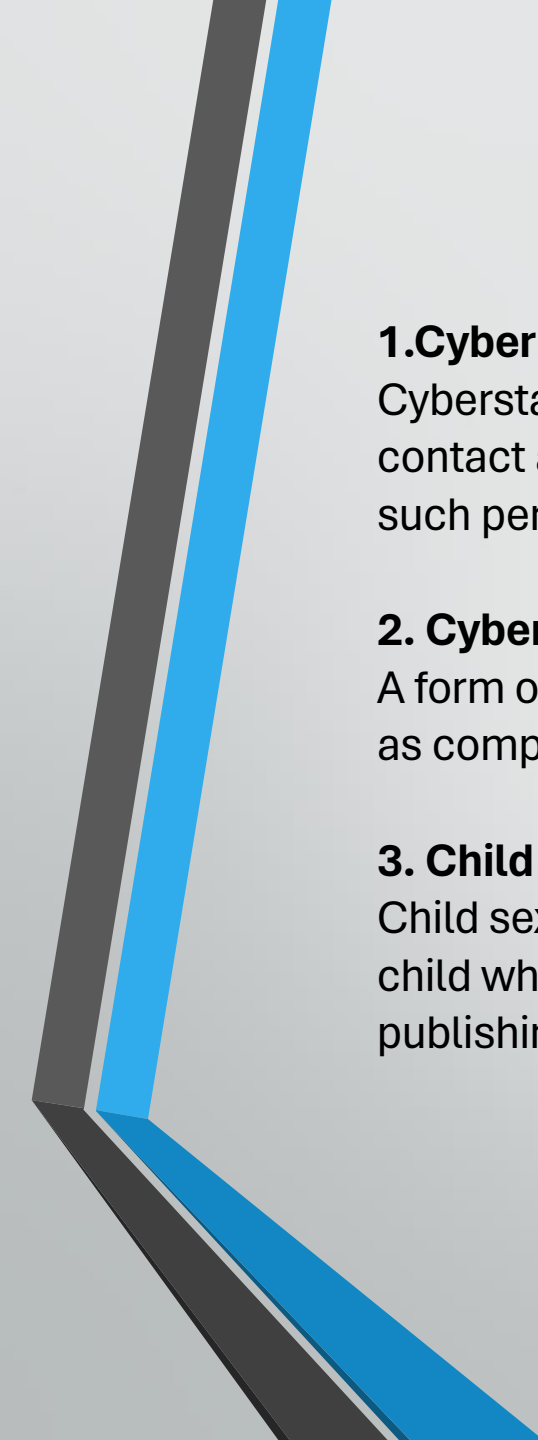

- Cybercrime is criminal activity that either targets or uses a computer, a computer network or a networked device. Most cybercrime is committed by cybercriminals or hackers who want to make money.
- Cybercrime can be carried out by individuals or organizations. Some cybercriminals are organized, use advanced techniques and are highly technically skilled. Others are novice hackers.
- Cybercrime may be defined as “Any unlawful act where computer or communication device or computer network is used to commit or facilitate the commission of a crime”.

TYPES OF CYBERCRIME

- Email and internet fraud.
- Identity fraud (where personal information is stolen and used).
- Theft of financial or card payment data.
- Theft and sale of corporate data.
- Cyberextortion (demanding money to prevent a threatened attack).
- Ransomware attacks (a type of cyberextortion).
- Cryptojacking (where hackers mine cryptocurrency using resources they do not own).
- Cyberespionage (where hackers access government or company data).
- Interfering with systems in a way that compromises a network.
- Infringing copyright.
- Illegal gambling.
- Selling illegal items online.
- Soliciting, producing, or possessing child pornography.

1.Cyber Stalking

Cyberstalking is the use of electronic communication by a person to follow a person, or attempts to contact a person to foster personal interaction repeatedly despite a clear indication of disinterest by such person.

2. Cyber Bullying

A form of harassment or bullying inflicted through the use of electronic or communication devices such as computers, mobile phones, laptops, etc.

3. Child Pornography OR Child sexually abusive material (CSAM)

Child sexually abusive material (CSAM) refers to a material containing sexual images in any form, of a child who is abused or sexually exploited. Section 67 (B) of the IT Act states that “it is punishable for publishing or transmitting of material depicting children in the sexually explicit act, etc. in electronic form.

4. Cyber Grooming

Cyber Grooming is when a person builds an online relationship with a young person and tricks or pressures him/ her into doing a sexual act.

5. Online Job Fraud

Online Job Fraud is an attempt to defraud people who are in need of employment by giving them false hope/ promise of better employment with higher wages.

6. Phishing

Phishing is a type of fraud that involves stealing personal information such as Customer ID, IPIN, Credit/Debit Card number, Card expiry date, CVV number, etc.

How to Prevent Cyber Crime

- **Using strong passwords** that are lengthy, complex, and not easy to crack.
- **Avoiding suspicious links and attachments** in email messages.
- **Enabling multi-factor authentication (MFA)** to add an extra layer of security.

Businesses and individuals can use cyber security measures such as the following:

- **Firewalls** control incoming and outgoing traffic on a computer network, blocking external threats from entering.
- **Antivirus software** can detect, quarantine, and remove malicious and suspicious applications.
- **Intrusion detection and intrusion prevention systems (IDS/IPS)** monitor network traffic and system logs to identify and respond to potential threats.

Cyber Attack Statistics

What are the costs and impact of cyber attacks for businesses?

The global cost of cyber attacks is expected to grow by 15% per year and is expected to reach over \$10 trillion. A growing part of this cost is Ransomware attacks, which now cost businesses in the US \$20 billion per year.

The average cost of a data breach in the US is \$3.8 million. Another alarming statistic is that public companies lose an average of 8% of their stock value after a successful breach.

How well are organizations prepared for cyber attacks?

In a recent survey, 78% of respondents said they believe their company's cybersecurity measures need to be improved. As many as 43% of small businesses do not have any cyber defenses in place. At the same time, organizations of all sizes are facing a global cybersecurity skills shortage, with almost 3.5 million open jobs worldwide, 500,000 of them in the US alone.
